Listed on the following pages are the Kits, Plans, and accessories currently available. Number gaps in kits and decals reflect items that are not available any longer. All plans are flying models separated into the following categories: Peanut scale, non-scale, and larger scale flying model drawings. All plans have been designed from 3 views, photos, and other reference material of the actual aircraft. Some have enlarged tail surfaces for better flying characteristics. Scale references are included and where possible scale markings are also included. Also included are any special building instructions and separate printed parts sheets so you don't have to cut up the plans or go get extra copies made. Prototypes of all models have been built to verify the accuracy of the drawings. However, we don't claim infallibility so if you find a mistake somewhere please let us know so we can correct it.

COMPLETE LASER CUT KITS NOW AVAILABLE

We started our line of laser cut complete kits and short kits with subjects from our print wood line that have been out of stock after our stocks of print wood have been used up. In many cases the original designs have been modified slightly and have additional drawings and instructions. As we go into this new line the kit numbers will be the same as the old kits with the suffix -LC added to the kit number. In the future any new kit designs will continue with the next kit number in line and a -LC added.
